

The Dental Experts at BURST are always electrified when they meet someone else who is as excited as they are about having healthy, white teeth. So we couldn't be happier that you've chosen our professionally formulated, enamel-safe whitening strips. You are going to absolutely LOVE them!

HOW TO APPLY

1. With dry hands tear open the packet and gently peel the strip from the back liner.

2. Give your mirror a toothy grin and place the gel side to your upper teeth aligning the strip to your gums. Apply pressure for best contact. Repeat with lower strip.

3. Sit back and relax. Within 10-15 minutes, 90% of the gel will dissolve. Don't forget to spit out the leftover plastic strip – it's not edible! Use the BURST sonic toothbrush to fully clear teeth of gel and then put on your best BURST smile!

Ingredient list: Glycerin, Aqua, Cellulose gum, Hydrogen peroxide (6%), Disodium EDTA, Cocos Nucifera (Coconut) oil, Menthol, Citric acid.

TRICKS OF THE TRADE

Dr. Shaun, our Chief Dental Officer, has some very useful pro tips:

1. Make sure you floss regularly, and directly before application, as that will remove plaque which will block the whitening agent.
2. Do not brush directly before applying with fluoride toothpaste; the fluoride sticks to your teeth and prevents penetration.
3. Dry your teeth before applying the strips. This not only allows better penetration but also allows the strips to stay in place.

For optimal results use a second, one week supply to give a total of 2 weeks whitening for absolute stain-blasting effectiveness.

We recommend that a course of BURST's whitening strips should not be done more than 4 times a year (every three months).

SAFETY INFO Caution: Keep out of reach of young cubs. BURST Whitening Strips are not intended for children under the age of 12. We advise against use for women who are currently pregnant, but please consult your doctor.

> BURST Whitening Strips should only be applied on natural teeth and should not be applied on any prosthetic or artificial teeth. They will not whiten dentures, fillings, veneers, crowns or caps.

> Do not use on braces, restorations or loose teeth.

> BURST Whitening Strips are not intended to replace regular brushing and oral hygiene, but to complement dental care recommended by your dentist.

> Avoid contact with eyes. Rinse your eyes thoroughly if they come into contact with the whitening strip.

> Any whitening gel that comes into contact with your skin can cause temporary whitening and irritation, so wash your hands with soap and water after handling the strips.

> Do not eat, drink (except water), smoke or sleep (treatment only takes 10 mins!) when BURST Whitening Strips are still on your teeth.
